Essential Covers

Boom Covers

Dolphin Covers offer different style boom covers to suit your requirements. We offer the basic shaped cover, stackpacks designed to be used with lazyjacks and even a style with detachable side awnings which double up as a sun shade.

Stackpack Covers

WeatherMAX™

Dolphin stackaway covers are made to a one piece design so there is no separate hood to remove. The cover clips together between the slides and the mast to produce a good fit, stopping the cover flapping in the wind. The front section of the cover is designed to tuck back on itself when sailing. These covers are designed to fit the existing number on lazyjacks on your boat. To help support the sides to the cover and keep its designed shape we supply one piece battens which are stiffer than the 2 or 3 piece battens with connectors that many other manufacturers supply.

For the cruiser/racing customer you can upgrade the cover to have roll away clips added, this will allow you to easily detach or pull the lazyjacks forward and roll the cover sides away and clip them against the boom. This option cuts down on the windage on the cover sides and also allows better viewing of the mainsail sail shape.

If you don't want to purchase a separate awning we have come up with an innovative design which has roll away sides to be zipped onto the cover creating an awning that fixes down to the stanchion/guardrail tops. This is very popular with customers who are spending a lot of time cruising in the UK.

Furling Genoa Sock Cover

If your furling genoa does not have a UV sunstrip fitted then Dolphin can supply a genoa sock cover to suit.

Dolphin genoa socks are made from WeatherMax 80, which is considerably lighter in weight than acrylic but more importantly WeatherMax is breathable. This will reduce the potential of mildew on your sail.

The cover is hoisted on the spare genoa or spinnaker halyard, a zip runs the entire length of the cover to keep it fastened together. To stop the cover flapping once hoisted, just pull on the twin two part lacing system to draw in the excess cloth. This line is then fastened at the tack/base of the furler to retain the tension.

Measurements

Measurement	Size in mm
Maximum luff length of sail	
Circumference of furled sail at clew	
Height of clew when furled above tack	
Colour required	

The above measurements are required for each genoa sock cover that is needed.

Wheel & Pedestal Covers

Protect your boat's wheel and pedestal from the damage caused by the elements and UV especially if sailing in hotter climates or when leaving the boat for long periods of time. Dolphin have different solutions depending on whether the boat requires one cover to encase both the wheel and pedestal or you need to have two individual covers to suit.

Dolphin can supply a comprehensive self-measurement form which can be submitted in order for us to design your sail cover.

Individual Wheel & Pedestal cover

Combined Wheel & Pedestal cover

Table Covers

Cockpit tables are a must for dining and entertaining while on your yacht. They also are one of the main items that get heavily affected by the elements and UV. It is costly to have your table refurbished and re-varnished over time, so to save on these costs we offer custom table covers to suit. Our covers can be designed to accommodate ease of access to any storage or built fridges that your table may have.

Winch Covers

WeatherMAX™

Finish off the look of your yacht with a set of matching winch covers. Our winch covers are designed to protect the winches from the elements. They are manufactured with a non-slip grip lining and elastic to ensure that they are a snug fit and don't blow off in a breeze.

These are also made from WeatherMax in order for us to colour match against your existing canvas work.

Elastic stitched around the centre and base of the winch to produce a snug fit so as not to blow off in the wind.

Non slip material is stitched around the base in order for the cover to grip to the winch.

Measurements

Measurement	Size in mm
Ø-A	
Ø-B	
Ø-C	
Ø-D	
A1	
B1	
C1	
Sheet cut out required	
Colour	

The above measurements are required for each winch cover that is needed. The colour will also need to be supplied along with the height of any plinths to which individual winches are fitted.
